

Annex 4 – Allocation Rules

Gas Connect Austria will apply one of the following allocation rules to the Transportation Contract:

a) Pro rata

Each Shipper is allocated its quantity according to the proportion of its weighted confirmed nominations to the total measured quantity.

b) Interconnection Agreement (“IA”) with Operational Balancing Account (operating and balancing agreement with declaration of all shippers)

All shippers will be allocated quantities equivalent to the confirmed nominations if the operator(s) of the upstream and/or downstream pipeline system(s) have concluded an IA with Gas Connect Austria. The difference between the measured quantity and the sum total of confirmed nominations will be shown on an imbalance account by the system operators involved.

c) Mix

This is a combination of the above allocation rules; i.e. the allocation rule at the Inlet Point differs from that at the Outlet Point.

d) Individual allocation rule

Gas Connect Austria stipulates the individual allocation rule in the Transportation Contract.
